

JUNIOR SOFTWARE DEVELOPER

Company: Techedify, Inc. (Generative AI EdTech Company)

Location: Philippines

Work Setup: Remote (once-a-month office visit)

Schedule: 3:00AM – 1:00PM PH Time

Experience Level: Entry-Level / Fresh Graduates are welcome to apply

About the Company

We are a **Generative AI-focused EdTech company** dedicated to increasing **Generative AI awareness and practical adoption**. Our products include an **AI-powered LMS/LXP**, interactive **learning content and courses on Generative AI**, and an innovative **vibe-coding tool** designed to help users build with AI more intuitively.

We build modern, scalable web applications that integrate cutting-edge **Generative AI tools and APIs** to deliver meaningful learning experiences.

About the Role

We are looking for a **Junior Software Developer** who is eager to learn and grow in a fast-evolving Generative AI environment. This is an **entry-level role**, ideal for fresh graduates or early-career developers who want hands-on experience building real-world products.

You will work closely with **Project Managers based in California** and undergo **training and mentorship from Lead Developers**, gaining exposure to full-stack development and Generative AI integrations.

Responsibilities

- Assist in developing and maintaining web-based applications for our AI-powered platforms
- Work on **server-side** and **client-side** JavaScript components
- Implement features for an **AI-powered LMS/LXP** and Generative AI tools
- Integrate and consume **APIs**, including Generative AI APIs

- Follow project requirements and timelines coordinated by Project Managers
- Participate in code reviews, testing, and documentation
- Continuously learn and apply best practices in modern web and AI-driven development

Required Technical Skills

- Experience or academic exposure to **Node.js** or any server-based JavaScript framework
- Experience or academic exposure to **Vue.js or Angular** (or similar client-side JS frameworks)

Basic to intermediate knowledge of:

- **HTML**
- **JavaScript**
- **CSS**
- Understanding of **MVC (Model-View-Controller)** architecture
- Basic experience with **SQL databases**, such as:
- PostgreSQL
- MySQL
- Experience working with **API integrations**

Nice-to-Have Technical Skills

- Knowledge of **Object-Oriented Programming (OOP)** concepts
- Familiarity with **RESTful APIs**
- Hands-on experience or strong interest in **Generative AI tools** (ChatGPT, Claude, Gemini)
- Experience integrating **Generative AI APIs** (ChatGPT, Claude, Gemini)
- Interest in **AI-assisted development** or “vibe coding” tools

Other Qualifications

- Strong eagerness to learn and grow in Generative AI and software development

- Entry-level applicants and fresh graduates are welcome
- Good communication and collaboration skills
- Comfortable working in a remote setup
- Able to follow requirements and coordinate with Project Managers in California
- Curious about AI, education technology, and emerging developer tools

What We Offer

- **Remote work**
- Competitive entry-level compensation package and benefits
- Structured **training and mentorship from Lead Developers**
- Hands-on experience building **Generative AI-powered products**
- Exposure to **AI-driven LMS/LXP platforms and educational tools**
- Supportive learning-focused team culture
- Strong growth path for junior developers

HOW TO APPLY?

Interested applicants may email their updated CVs and other profiles or portfolios to ame@techedify.com together with your preferred schedule of virtual interview.
